SUMMARY

Recent B.E. graduate in Artificial Intelligence and Data Science with hands-on experience building LLM-powered tools, data dashboards, and NLP models through internships and personal projects. Comfortable with Python, SQL, LangChain, and Streamlit, and focused on creating practical, user-friendly solutions while continuing to grow in the field.

EXPERIENCE

Business Analyst – Apprentice

Jul. 2025 – Present

Trellix

Bangalore, India

- Owned and maintained the **NPI (New Product Introduction)** process, coordinating business requirements and managing cross-functional stakeholder communications.
- Conducted **product based insights analysis** using **Looker** and built performance dashboards via **Google Looker Studio** to support data-driven decision-making.
- Translated dashboard insights into **actionable recommendations**, directly influencing product prioritization and contributing to a measurable improvement in operational efficiency.

AI/ML Intern

Feb. 2025 – Jun. 2025

CMTI

Bangalore, India

- Built an **AI-powered semantic search system** for machine manuals using RAG and vector embeddings, enabling natural language queries and reducing lookup time by **70%**.
- Developed a **context-aware LLM querying engine** for OEE and downtime data, cutting analysis time by **60%**.
- Created a **real-time machine status dashboard** with intuitive visualizations.

AI Intern

Sep. 2024 – Oct. 2024

Graphene Healthcare Pvt Ltd

Bangalore, India

- Built a **Named Entity Recognition (NER) model** using LLMs to extract clinical entities (names, diseases, locations) from unstructured medical text.
- Achieved **over 95% accuracy**, surpassing conventional NER baselines across multiple clinical datasets.

Machine Learning Intern

May 2024 – Mar. 2025

Samsung R&D India (Prism)

Bangalore, India

- Developed an **adaptive federated learning optimizer** achieving **18% faster model convergence** over baseline methods.
- Implemented a **secure model aggregation pipeline** using encryption to protect client data privacy during distributed training.
- Improved global model accuracy by **~6% on CIFAR-10** via a client filtering mechanism that removed low-quality gradient updates before aggregation.

SKILLS

Languages : Python, SQL, Bash

AI / LLM : LangChain, RAG, Huggingface, Prompt Engineering, Agents, Vector Search

ML / DL : Scikit-learn, NumPy, Pandas, NLP, Generative AI

Tools & Platforms : Git/GitHub, Streamlit, Looker, Google Looker Studio, Jira, Confluence, Postman

PROJECTS

Automatic OEE using LangChain | LangChain, Groq (LLaMA-4), RAG [GitHub](#)

- Developed an **LLM-powered assistant** enabling real-time natural-language queries on manufacturing productivity data with contextual query routing and interactive visualizations.
- Scaled for **multi-plant operations**, improving query resolution speed by **65%** and accelerating decision cycles by **25%**.

CopyCatch: Smart Plagiarism Detector | LangChain, OpenAI GPT-4, Tavily, Streamlit [GitHub](#)

- Engineered an **AI-driven academic integrity system** combining GPT-4 with semantic vector search to detect reworded and AI-generated content.
- Built modular **agentic workflows** for citation validation, novelty detection, and paraphrase analysis using LangChain agents.
- Deployed a **Streamlit web app** for real-time plagiarism reports, reducing manual verification time by **over 70%**.

EDUCATION

Ramaiah Institute of Technology

B.E. in Artificial Intelligence and Data Science | **CGPA: 9.07 / 10.0**

Aug. 2021 – May 2025

Bangalore, India

ACHIEVEMENTS

- **GSSoC 2026 — Agentic AI Track**: Selected as a contributor for the Agentic AI track in GirlScript Summer of Code, one of India's largest open-source programs.
- **Code in Place, Stanford University (2026)**: Selected as a participant in Stanford's Python programming course based on CS106A, accepted from a global applicant pool.
- **Neo4j Certified Professional**: Completed Neo4j GraphAcademy certification covering graph database concepts, data modeling, and Cypher query language.
- **Manas Codeathon — 6th Place**: Built a memory game under timed competition constraints, placed 6th among all participating teams and awarded Consolation Prize.
- **Ideathon @ RIT — 3rd Prize**: Designed and presented a solution to a real-world problem statement, awarded 3rd place out of all competing teams.
